PHP Question Bank

1	Explain user-defined functions and parameter passing in PHP.
2	Describe array sorting techniques and related functions.
3	Summarize the significance of database connectivity in web applications.
4	Define variables, constants, and data types in PHP with suitable examples.
5	Discuss the architecture and working of PHP.
6	Identify commonly used file handling functions in PHP.
7	Explain different looping constructs available in PHP.
8	Describe regular expressions and their use in PHP.
9	Summarize the importance of security in PHP web applications.
10	Define functions in PHP and state their advantages.
11	Explain how PHP can be embedded within HTML pages.
12	Discuss the applications of PHP in modern web development.
13	Identify common array manipulation functions in PHP.
14	Define control structures and explain their purpose.
15	Describe built-in string functions used in PHP.
16	Summarize the role of PHP in dynamic web application development.
17	Discuss the installation and setup of XAMPP/WAMP server for PHP development.
18	Explain the use of control structures (if-else and switch) in PHP.
19	Identify different types of arrays available in PHP and give one example of each.
20	Discuss the features and benefits of PHP as a web development language.
21	Define arrays and explain their types in PHP.
22	Describe different date and time functions available in PHP.
23	Summarize the importance of SQL in database-driven applications.
24	Identify various string manipulation functions in PHP.
25	Analyze the complete lifecycle of a user session in PHP.
26	Apply CRUD operations using PHP and MySQL with suitable examples.
27	Compare GET and POST methods used in form submission.
28	Implement a PHP program to display the current date and time.
29	Examine session handling in PHP and its importance in web applications.
30	Evaluate the importance of indexes in database performance optimization.
31	Illustrate the process of form handling in PHP using GET and POST methods.

PHP Question Bank

32 Differentiate between variables and constants in PHP.

33 Solve a PHP program to validate an email address using regular expressions.

34 Compare indexed arrays and associative arrays in PHP.

35 Apply prepared statements in PHP to prevent SQL Injection.

36 Evaluate the advantages of using joins in relational databases.

37 Analyze file upload functionality and associated security concerns in PHP.

38 Solve a PHP program to reverse a string using built-in functions.

39 Examine security measures such as input filtering and output escaping.

40 Implement a PHP program to calculate the sum of array elements using a function.

41 Analyze the causes and prevention of SQL Injection attacks.

42 Compare sessions and cookies in PHP.

43 Illustrate file upload handling in PHP with suitable code.

44 Examine cookie security and best practices for web applications.

45 Apply SQL CRUD operations through PHP-MySQL connectivity.

46 Differentiate between user-defined functions and built-in functions in PHP.

47 Implement a PHP program to find the factorial of a number using a function.

48 Evaluate the role of transactions in database management systems.

49 Analyze session management and cookie management in PHP applications.

50 Illustrate file reading and file writing operations in PHP.

51 Differentiate between switch statement and if-else ladder.

52 Compare MySQLi and PDO database connectivity methods.

53 Solve a PHP program to sort an array in ascending order.

54 Apply database connectivity using MySQLi or PDO in PHP.

55 Evaluate the importance of database security in PHP applications.

56 Examine form validation techniques in PHP.

57 Illustrate the process of creating and reading cookies in PHP.

58 Differentiate between for loop and while loop with examples.

59 Implement a PHP program to search an element in an array.

60 Solve a PHP program to count vowels in a given string.
